

IPCRG 2020: Weekly Series of Hot Topic Clinical Practice Webinars & Abstract Presentations

Welcome to the 3rd IPCRG Hot Topic Webinar & Abstract Presentations

Breathing and feeling well through universal access to right care

1000hrs	Welcome and Introduction, Siân Williams, CEO IPCRG
1005hrs	COVID-19 in Primary Care: Protecting the Most Vulnerable Hanna Sandelowsky, Sweden & Chunhua Chi, China
1035hrs	Discussion / Q&A Session
1055hrs	Time for a New Era of Asthma Management Short Video & Tai Chi Exercises
1105hrs	Oral Abstract Presentations
1215hrs	Closing Remarks, Siân Williams, CEO IPCRG

Breathing and feeling well through universal access to right care

Oral Abstract Presentations

- **1. Can singing improve health and wellbeing in COPD? SingStrong: A pilot study** *Roisin Cahalan, Ireland*
- 2. COPD patients with asthma, characteristics and risk of exacerbations Karin Lisspers, Sweden
- **3. SABINA: An international programme describing overuse of short-acting β2-agonists in asthma and related clinical outcomes** *Jennifer Quint, UK*
- 4. Theoretically informed education to support asthma self-management in primary care: part of the IMP2ART programme *Viv Marsh, UK*
- 5. Screening for undiagnosed COPD; accuracy of different strategies among primary care patients in China: Breathe Well study *Zihan Pan, China*
- 6. Exploring the need for, and design of, a community "lung health" service for COPD patients in China: A Mixed Methods Study-A Breathe Well study Hui Pang, China
- 7. Markers of Air Way Inflammation, asthma control, and respiratory function among adult asthma patients in Sri Lanka Savithri Wimalasekera, Sri Lanka

Daxing Department in Daxing district

Miyun Hospital

More than 350,000 people die from COVID-19

Wuhan, the epicenter, was lockdown at 23 Jan, 2020

At the early stage

- People didn't know how to deal with the pandemic
- Wuhan was getting chaotic

Chaotic Wuhan at the first 2 weeks after lockdown

- A large number of patients with fever rushed to the hospital
- Beds can't meet demand
- Frequent family cluster infection
- Patients and their families frequently go back and forth to medical institutions and communities, increasing the risk of virus trans
- Go out at will, not stay at home

Fever clinic in hospital

- Preventing drowning is the same or much more important compared to rescuing drowning people who are dying.
- Community prevention and control is as important as drowning prevention, if not, How many beds are enough?

- 13 National expert groups on community prevention and control, in charge of 13 administrative areas in Wuhan respectively
- All communities were closed strictly since 11th Feb 2020
- Only one access each
- Everyone takes temperature when entering the community

Community prevention and control measures in Wuhan

- Four categories of personnel are classified and managed centrally
 - confirmed cases
 - suspected cases
 - close contacts
 - people with fever
- Everyone can be hospitalized, screening, isolation and treatment as long as they need
- Ensure no one is missed

Increase hospital beds

- Open more beds in existing hospitals
- Building new hospitals include Fangcang shelter hospitals
- "patients waiting for beds" changed to "beds waiting for patients"

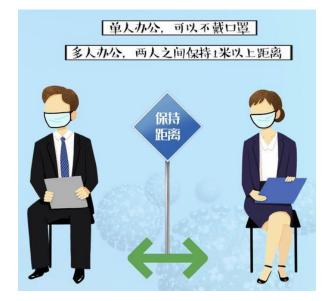

To promote health awareness and disease prevention knowledge

• 1.4 billion people working together in China

wear mask

wash hands

keep distance

All over the country returned to work and school successively

General principles

- External defense input and internal defense rebound
- Wear masks
- Keep a safe distance
- Temperature measurement
- Work in different periods to avoid gathering

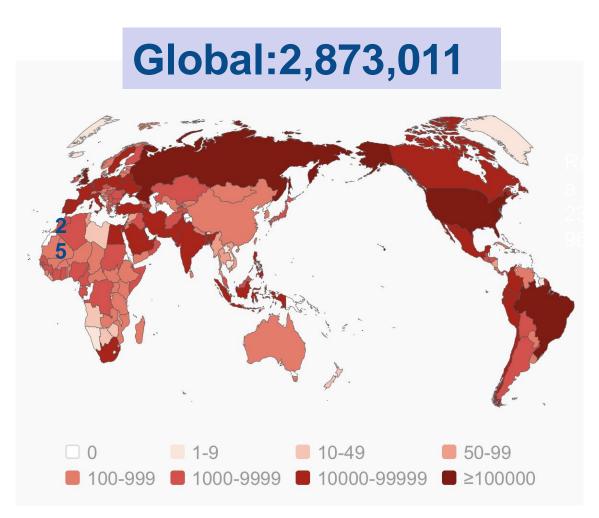

Existing cases (May 27, 2020)

Epidemic situation in China (As of May 27, 2020)

	Number of cases
Existing cases	120
Asymptomatic	404
Cumulative confirmed cases	84545
Overseas import	1732
Cumulative death	4645
Fatality	5.49%

How to protecting the most vulnerable?

Who are the most vulnerable population?

- Aged
- Patients with chronic diseases
- Children
- Maternal
- Low income group
- Low level of Education

The Chinese government has formulated policies to protect vulnerable groups

Make every effort to provide support and guarantee for front-line medical staff and their families (National Health Commission)	
Prevention and control of COVID-19 in children and pregnant women (National Health Commission)	
Health care service for COVID-19 in the primary health care institutions for elderly and chronic patients (National Health Commission)	 Provide online medical treatment, family substitute medicine and long-term prescription for the disabled, the elderly and the patients with chronic diseases who are unable to move Give priority to information technology to provide health management services for the elderly and patients with chronic diseases

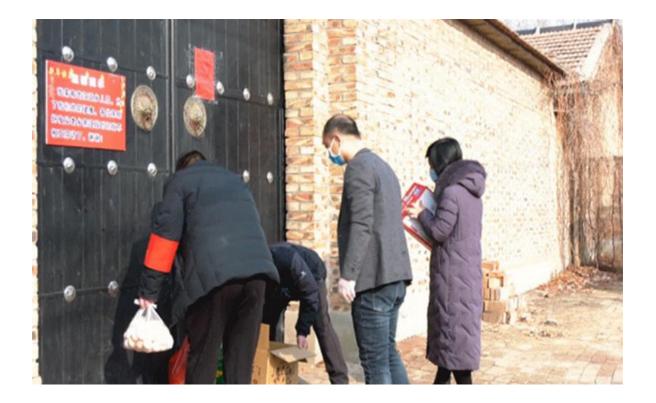

The Chinese government has formulated policies to protect vulnerable groups

Strengthening management of patients with severe mental disorders during COVID-19 outbreak (National Health Commission)	
Strengthen the guarantee work of vulnerable groups during COVID-19 outbreak (Poor population, isolated people, orphan, disabled etc.)	 payment of living expenses and nursing expenses Street neighborhood committee delivers necessities The principle is to help and rescue when they are in trouble

Ministry of Education: delay the opening of the schools; Online courses

Deliver the necessities near the door

Study online at home

- Lockdown on 23rd Jan
- Lifting the lockdown on 8th April
- 14th 23th May, detection antibodies of novel coronavirus 2019, 6.574 million person times, 189 asymptomatic infections were found (0.00287%)
- Wuhan contributes to China and also the whole world

All human beings share the same destiny Countries should join hands to fight the epidemic
