## INFORMATION FOR RESEARCHERS

**The abstract committee chaired by Izolde Bouloukaki  
welcomes abstracts in 3 categories**

### **1. CLINICAL RESEARCH**

Your abstract may be a summary of the findings of exploratory, effectiveness or implementation research that addresses a clinical question and uses a research method. You must have data and the work must be relevant to a primary care respiratory audience. Bear in mind that the IPCRG campaigns for patient care to be evidence-based, using evidence from real life, that includes populations representative of primary care populations.

The questions from our Research Prioritisation exercise provide a useful guide to what would be of most interest to our audience. Please follow the IMRaD format, including an Introduction, Method, Results and Discussion (meta-analyses may require a different format).

### **2. SERVICE DEVELOPMENT AND IMPROVEMENT**

Service development & evaluation abstracts are encouraged and should describe an intervention to create, improve or evaluate a service or interventions that benefit respiratory health, including educational interventions and quality improvement programmes. This can include surveys and should include the aim, outline of context, a brief description of the change and why you thought it would work, your strategy for change, impact and lessons learned.

### **3. RESEARCH IDEAS**

The research ideas category welcomes abstracts that are either a proposal for research that has been carefully planned but is yet to be conducted or protocols for approved research, which may already be underway. The abstract should include the research question, background, methodology and questions to discuss.
